

seats to suit!

Catalogue

Score, seats to suit!

The Dutch company from Tolbert in the Netherlands exists 35 years, 35 years of expertise in ergonomic seating. This new catalogue illustrates the constant renewal Score is continuously going through. On one hand the product developers are constantly designing new products and new product features, where in the design we strive to Cradle-to-Cradle principles, to assure our children a better World, and on the other hand the automation of Score is put on a higher level by taking a new ERP system in use with a product generator to minimize faulty input, to increase the service level to you.

What's new

New in the catalogue is that most products are equipped with a flat back bar, through which the back is more stable, and also looks a lot nicer. Of course the quality of all changes have been thoroughly tested, quality stands on the first place at Score. Also new is the balance mechanism for the Jumper, Amazone and Jolly. The balance mechanism makes the already comfortable Saddle Seats even more comfortable. Also the fabrics have undergone changes in even more resistant fabrics in wool as well as Trevira.

Score is market leader in the Netherlands

Score is market leader in the Netherlands, but export is becoming increasingly important to Score. More and more the quality of the Score products gets known across borders. The recession has almost gone past to Score because of the increasing product lines such as e.g. medical specials and the growing export. Score offers you:

- High quality industrial design, winner of many national and international awards
- Ergonomic design in accordance with Dutch standard NEN EN-1335
- Complete range, the best solution for every workplace
- Custom seat solutions available
- ISO 9001: 2000 certification

■ ■ ■ 4400 Line

The PU Pro models are eminently suited to heavy duty in various environments such as laboratories and industrial workplaces. The ample seat, the convenient footplate and the soft polyurethane upholstery ensure comfortable sitting. The seat and backrest are easy to clean and resist most chemical substances. And last but not least: the chairs are very comfortable, so you can go home relaxed after a hard day's work. All PU Pro models can be fitted with a sliding system to increase seat depth by up to 7 cm. Now that's comfort! All PU Pro models are also available in an ESD version.

4400 PU Pro

- Height adjustment 44-57 cm
- Worksurfaceheight 70-80

4401 PU Pro

- Height adjustment 52-71 cm

■ ■ ■ Spirit Line

The Spirit Line is suitable for all kinds of environments and provides the “right spirit” in a wide range of workplaces such as laboratories, schools, hospitals or call-centres. The sophisticated design of the backrest provides extra freedom of movement for the shoulders. The five star base is small, which makes this chair ideal for workstations with little space. Polyurethane is a very strong material, and soft to the touch. It is also easy to clean and very durable.

■ ■ ■ Saddle chairs

Experience the comfort of a Score saddle chair. The ergonomically shaped saddle seat ensures a healthy back posture, whilst the feet are planted firmly on the floor. The shape of the saddle promotes the natural S curve of the spinal column and thus a less tiring posture. The saddle chair makes it possible to easily move sideways and around your workplace. The Score saddle chair comes in two different forms. The "Jumper" has a wider seat and the "Amazone" a narrower seat. It is also possible to provide the Jumper, Amazone and Jolly with a "Balance" mechanism as accessory. This sophisticated mechanism moves the seat in the direction of the centre of gravity of the user's upper body when changing posture. The pelvis and the spinal column stay in balance, and pressure points such as the inside of the thighs and the pubic bone are relieved of pressure. The already comfortable saddle seat is thus even better. The seamless upholstered saddle seats are designed for workplaces where hygiene is very important.

Jumper/Barrage Line

■ ■ ■ Sit stand stools

Sit stand stools provide the solution for work that requires frequent changes between sitting and standing. They are also ideal for workplaces where there is a lack of leg space. In order to work comfortably and without strain, your sit stand stool should be adjusted to the desired working height. Thus, you find the beautifully designed “Steady” in many museums, including the famous “National Museum” in Amsterdam. With the adjustable seat and the handy footrest (foldable), the “Steady” can be used for support in a standing position as well as being a comfortable seat.

Sit stand stools

Sit stand stool 232

■ ■ ■ Medical Line

The Score Medical Line is specially developed for use in hospitals, outpatient clinics, doctor or physiotherapy practices, etc. The Medical Line is usually equipped with special arm and back rests. All models can be provided with a foot-controlled height adjustment for situations where the hands have to be kept free for sterility reasons. For the upholstery you can choose e.g. Stamskin with its antibacterial properties; it is watertight, urine proof, resistant to flame. The 6200 range has a round 40 cm seat, while the 6300 range has an ergoshape seat with cut-outs which allow you to reduce pressure points on the upper legs.

Stools

Medical 6101/6301

■ ■ ■ Medical Line

For people who suffer from a temporary or permanent handicap, Score developed a range of products which make it easy to continue working or start working again. For example, there are height and adjustable-angle leg supports, for 1 or 2 legs. Patients suffering from hip arthrosis are compelled to do complicated exercises on a daily basis in order to stimulate the blood circulation in the hip joint. The ergonomically shaped Artromove gives patients the possibility to fit these exercises easily into their daily life. For people with a rigid leg or a leg length difference, the Artrodese chair can be a solution. Both leg supports can be separately adjusted at an angle which reduces the pressure on the back of the thigh. For people with problems with muscle tension or who need extra stability, Score developed the Triple chassis. Its H-shaped frame is applicable to most of the chair models. The Triple chassis is provided with large wheels and a central brake. Score also has a sturdy and easy adjustable phlebotomy chair with 1 fixed, inclined armrest in its assortment.

Leg support/Artromove

Legrest single

- Height adjustment 45-58 cm
- Height and angle adjustable

Double legrest

- Height adjustment 45-58 cm
- Height and angle adjustable

■ ■ ■ Phlebotomy chairs

'When drawing blood, I always try to ensure that the patients feel at ease. A comfortable sitting position and the flexibly adjustable phlebotomy chairs help to achieve this. The special armrests ensure that the patient's arm can lie there fully relaxed. The armrest can be adjusted to place the patient's arm in the most optimal position so I can draw the blood quickly and proficiently'.

Phlebotomy chair standard

The basic model from our phlebotomy chair series can be used practically anywhere given its compact design.

- height range 44 – 57 cm
- aluminium base ø 70 cm
- floorcaps
- including 1 fixed armrest type M PU

Phlebotomy chair Vario

A comfortable phlebotomy chair which can be simply transformed in an instant into a "Trendelenburg" position when the patient feels unwell. At the same time as tilting the back, the leg rest rises up. Get up brackets are optional but make life easier for elderly patients. This phlebotomy chair can additionally be fitted with wheels and a brake or another armrest.

- fixed seat height: 46 cm
- provided with legrest
- floorcaps
- including 1 armrest M Vario

Phlebotomy chair Vario Hydro

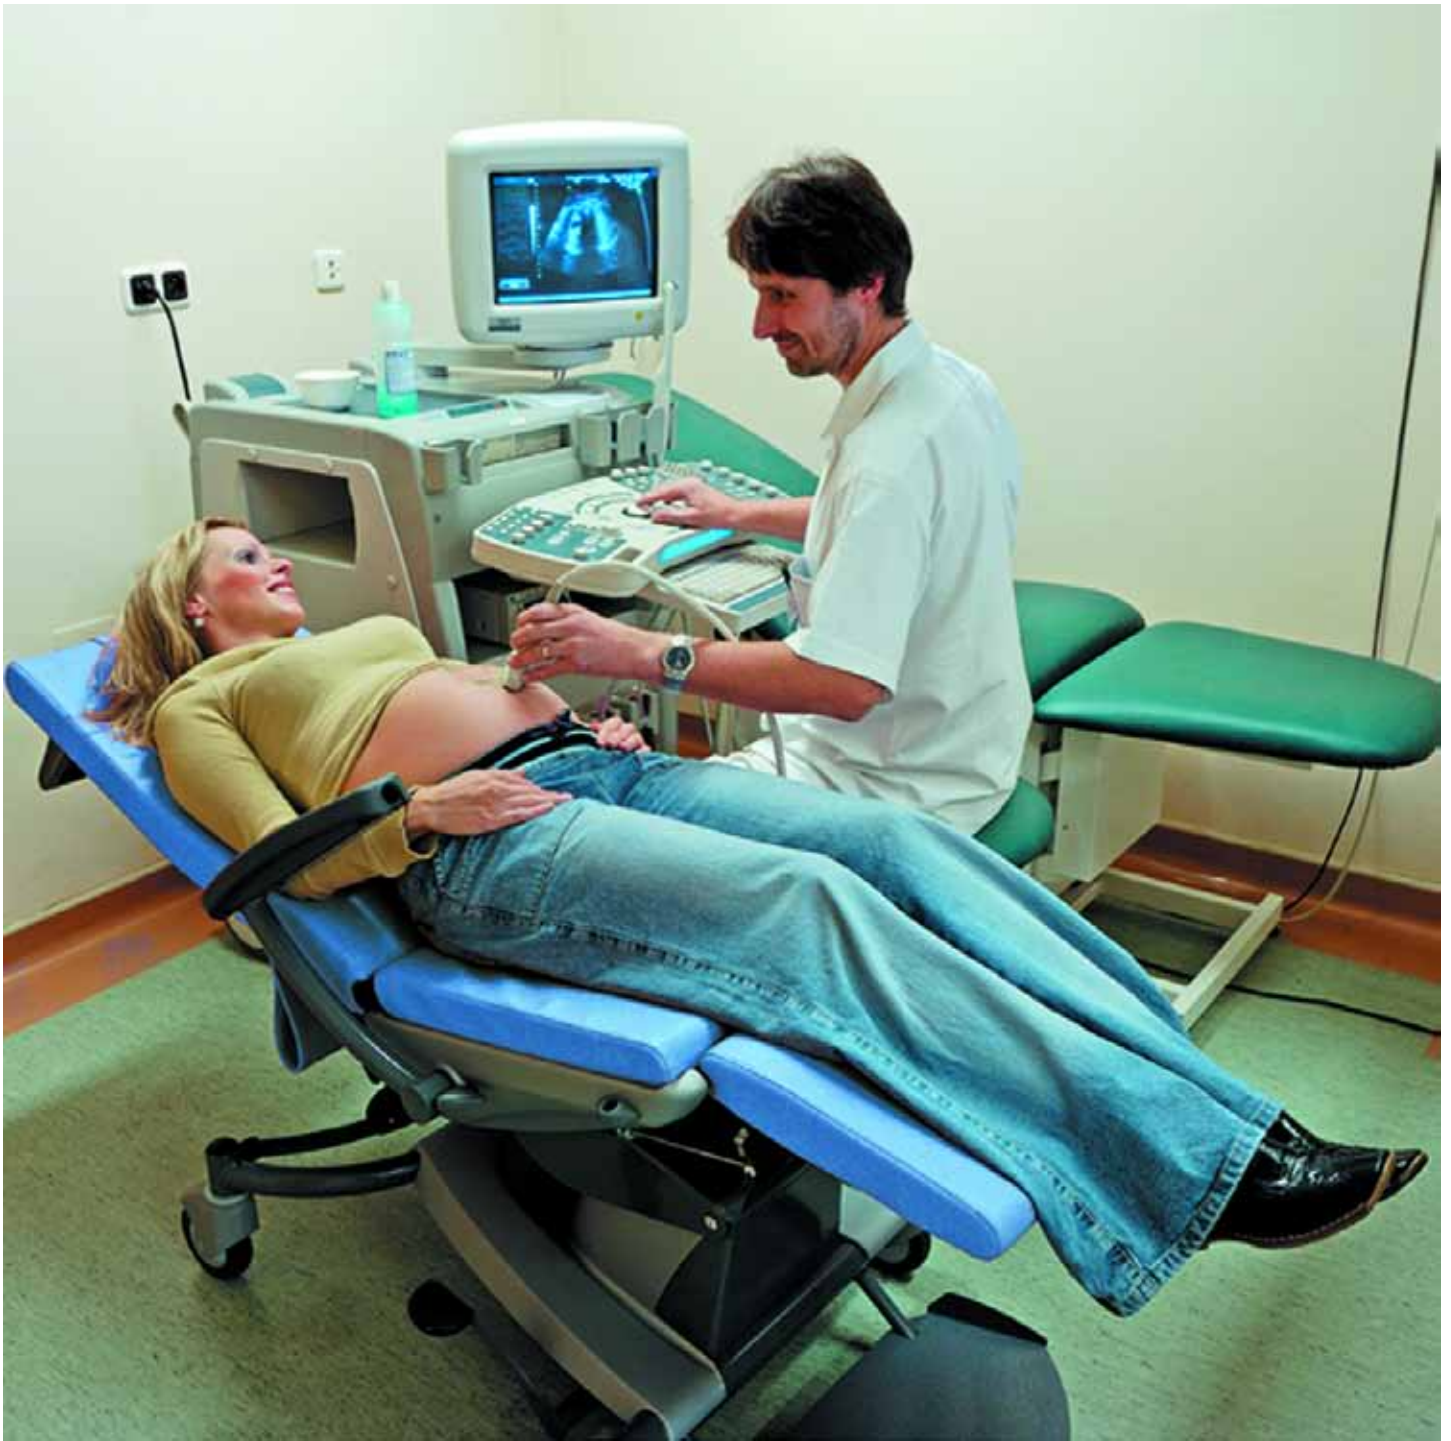

While the patient sits in the chair, it can be raised to the desired height with the hydraulic height adjustment system. Especially for elderly patients, this can make it easier to get in and out of the chair. This phlebotomy chair can additionally be fitted with wheels and a brake or a additional armrest.

- hydraulic height adjustment 45-62 cm
- aluminium base ø 70 cm
- floorcaps
- including 1 armrest M Vario
- backrest can be tilted backwards up to 45°

Artromove

A stool with an armrest that supports the nurse's arm while drawing blood. The cut-outs in the seat prevent thighs "going to sleep" (ergoshape). Also available with a round seat.

- height adjustment 55-74 cm
- working surface height 80-90 cm
- fixed sitting angle

■ ■ ■ Patient chair

Under the name MediMove®, ScoreMedi is marketing a multifunctional patient chair. This chair has many practical functions that considerably augment its ease of use for the patient and nursing personnel. The MediMove® has a unique design, combining ergonomics and comfort. With its light weight, optimal manoeuvrability and sitting comfort, the MediMove® is the ideal patient chair in nursing homes and hospitals.

MediMove Standard

As the chair is extremely flexible and easy to adjust, the MediMove® is also suitable for use as an examination or phlebotomy chair. Patients no longer need to be transferred to another chair or bed. The ergonomic design of the MediMove® ensures that the doctor or nurse can carry out a task quickly and proficiently. The MediMove® has a fixed seat height and is standardly equipped with an armrest, push bar, headrest and footrest. The MediMove® is also standardly fitted with a Stamskin cover K80 in light blue or K05 in black.

Blood drawing armrests

As this blood drawing armrest is extremely flexible and easy to adjust, the MediMove® is also suitable for use as a phlebotomy chair.

The central foot brake increases the safety of patients and the ease of use for the nurse.

MediMove adjustable

The MediMove® can additionally be fitted with various options, like an independent adjustable back angle and height adjustment. This flexibility allows the chair to be adjusted precisely to the patient's needs. The height can be easily adjusted with a foot control on the side of the chair, lifting the patient simply to any height and transferring him/her from the chair to the bed. The MediMove® can be additionally fitted with various accessories:

- side supports
- document folder
- urine bag holder
- tray table
- infusion stand + holder
- large headrest

Stand-up function

Lifting and transferring patients is one of the most physically demanding procedures in health care. The MediMove® is fitted with a hydraulic system for tipping the seat and armrests. This reduces the nurse's physical exertion to a minimum when lifting and transferring patients.

■ ■ ■ Feeding/Mammographic chair

"We have to feed some newborns at regular intervals. Especially during the night shift when fewer staff are present, I can spend a lot of time in a feeding position, and eventually I really feel it in my neck and shoulders. After having tried out several chairs, we contacted ScoreMedi. After all, ScoreMedi is famous for the slogan "ScoreMedi has a chair for every workplace or we shall make one especially for you!" Based on a list of specifications, the Nutrimax was designed and produced. Finally, I can sit comfortably to feed without getting neck and shoulder pain!"

Feeding chair Nutrimax

Developed for nursing personnel giving bottle feeds and fitted with specially designed armrests. They are easy to adjust, and can be swung aside when sitting down or standing up. As not all nurses are the same height, the chair is equipped with a telescopic height adjustment system, allowing the chair always to be positioned at the right height. The synchro mechanism allows the chair to be used as a rocking chair. In addition, the chair can be fitted with a headrest, wheels that brake under load or trumpet feet.

- telescopic height adjustment 39-54 cm
- including armrests type 9
- synchro mechanism

Feeding chair Nutrimax MC

The Nutrimax MC (Mother Care) was developed for giving breastfeeding and fitted with specially designed armrests. They can be easily swung aside when sitting down or standing up. While the mother sits in the chair, the hydraulic height adjustment system can bring the chair to the desired level. This allows the nursing personnel to position the baby correctly. Fitted with moveable footrests that are easily folded up to make sitting down or standing up simple.

- hydraulic height adjustment 45-62 cm
- including armrest type 9
- rotation lock
- foldable footrests

Mammography chair

While the patient sits in the chair, the hydraulic height adjustment system can bring the chair to the desired level. The chair is brought close to the mammography scanner and then the wheels are locked, to keep the chair in the exact position. The footrest not only offers good support, it allows the chair to be brought close to the device. The armrests can be folded away, which is particularly beneficial for wheelchair-bound patients.

■■■ Radiography chairs

“As a radiodiagnostic technician, I accompany patients during an MRI scan. Sometimes it is better to stay with the patient during the procedure. As the MRI scanner contains a magnet weighing 4600 kg, I cannot sit on a chair with any magnetic parts. For the “UMC Utrecht” this was an incentive to develop a non-ferromagnetic (non-magnetic) chair and stool together with ScoreMedi. Now I can safely stay with my patient throughout the procedure.

Vario Nucleo

This is used in the nuclear medicine department, for example to make an echo of the thyroid gland. The Vario armrest allows the patient to rest his/her arm and relax while the radiopharmaceutical is injected into a blood vessel. During the scan (10 min.), the patient must keep his/her head perfectly still. The headrest has been designed so that the head fits in exactly and thus remains fixed. While the patient sits in the chair, it can be brought to the correct height with the hydraulic height adjustment system.

- upholstered in stamskin
- hydraulic height adjustment 45-62 cm
- rotation lock
- optional: castors with brake and lock

Photo chair

Faces of patients being examined for plastic surgery can be photographed from five different angles. This happens before and during the treatment procedure to monitor the progress closely. A twist lock specially constructed for this purpose ensures that the photos are always taken from the same angle.

- Special headrest to fix the head
- Precise turn adjustment in 5 positions

MRI chair

Constructed from non-ferromagnetic parts (not magnetic).

- beech seat
- height 50 cm
- also available in heights 50 and 55 cm
- aluminium base ø 67 cm
- floorcaps

MRI stool

Constructed from non-ferromagnetic parts (not magnetic).

- PU seat
- height 45 cm
- also available in heights 50 and 55 cm
- aluminium base ø 50 cm
- floorcaps
- soft castors

■ ■ ■ Ergo 2300 Line

Ergo Line, “the No-Nonsense chair” from Score. The Ergo Line from Score has already proven for many years to be the workhorse in many situations. This chair complies to NEN_EN 1335_1 ergonomic standards, is indestructible and can be delivered in any desired height. Options include armrests, sliding seat, and footboard. The seat angle, back angle, and back height can be separately adjusted to the desired position for optimal sitting comfort.

2300 Line

Ergo 2300

- Height adjustment 46-59 cm
- Worksurfaceheight 70-80 cm

Ergo 2301

■ ■ ■ 5100 Line

With the 5100 line, Score brings a unique line of chairs on the market, based on an identical design but in three different sizes: small, medium and large. They are provided with a synchro mechanism and armrests, which can be adjusted in height and breadth and also rotated. A backrest has a fancy but also functional look. Its lower part is broad for an optimal back support, and its upper part narrow to allow the shoulders free movement. As the chairs are not only designed with a fancy look and provided with all the necessary conveniences, they meet the individual requirements and wishes of every user. And that, according to Score, is one of the most important criteria for a chair. In other words, a line of chairs that fits you like a glove!!

5100 Line

5100 Small

- Height adjustment 49-63 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 47 x 47 cm (W x D)
- Back appr. 46 x 54 cm (W x H)

5100 Medium

- Height adjustment 49-63 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 50 x 50 cm (W x D)
- Back appr. 46 x 54 cm (W x H)

5100 Large

- Height adjustment 49-63 cm

■ ■ ■ 5000 Line

The 5000 Line has two models, the "5000" is suitable for users up to 120 kg and model "5000 Enforced" is suitable for users up to 150 kg. Model "5000 Enforced" is standardly equipped with a seat depth adjustment. Both chairs can withstand strong forces and are provided with various adjustment systems. To increase the sitting comfort even more, there are several accessories such as a headrest, a sliding seat, an adjustable lumbar support, etc. A good sitting position is less tiring and promotes better performance!

5000 Line

5000

- Height adjustment 48-61 cm
- Worksurfaceheight 70-80 cm

■ ■ ■ MaXX Line

These robust chairs are specially designed for heavier people (up to 250kg). The MaXX Line is available in 3 different standard sizes, but because everyone is unique, the three backrests and seats are interchangeable to arrive at a more individualised solution. Along with the chairs, Score also developed a waiting room chair that promotes steady and safe sitting.

MaXX S

- Height adjustment 47-61 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 50 x 53 cm (W x D)
- Back appr. 46 x 50 cm (W x H)

MaXX M

- Height adjustment 47-61 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 57,5 x 53 cm (W x D)
- Back appr. 46 x 50 cm (W x H)

MaXX L

- Height adjustment 47-61 cm
- Worksurfaceheight 70-80 cm
- Seat appr. 65 x 53 cm (W x D)
- Back appr. 56 x 50 cm (W x H)

Waitingroom chair

- Height 46 cm
- Seat appr. 57 x 55 cm (WxD)
- Back appr. 55 x 39 cm (WxH)
- For people up to 250 kg

■ ■ ■ Hall/meeting/waitingroom Line

The waiting room is fitted with the fashionable At Ease chairs from Score. A light but strong chair, finished off in beautiful beech or wear-resistant woollen upholstery. Truly a chair that makes a statement. It is not only beautifully designed and wonderfully comfortable, it can be easily linked to make space-efficient rows. At Ease can also be used in cafeterias and meeting rooms. The At Ease seat is so comfortable that even conference rooms and auction centres are equipped with them. It can be supplied as an occasional chair or in several combinations as a hall bench.

■ ■ ■ Hall/meeting/waitingroom Line

The "At Ease" line also has a modern design office chair. The At Work from this line is a beautifully shaped and very comfortable office chair, provided with a tilting mechanism. The seat is available in beech or upholstered in Trevira, wool or leatherette. Model 2350 can be used as an occasional chair for the ErgoLine and model "5200" for the 5100 Line. Thus, you can combine your office chair with a matching conference chair. The "Aspire" is a stackable slide track chair that is provided with a seat based on the comfortable form of the At Ease. The slide track chair is characterised by gently swaying as you sit on it, which gives a greater sense of comfort.

■ ■ ■ Footrests

You need a footrest if you cannot place your feet flat on the floor when your upper and lower legs form a 90° angle. In some cases a footring or footplate attached to the chair will suffice. It is more convenient to use a loose footrest, which you place in front of you. Score's "Basic 952" footrest enables a healthy sitting position. The height of the footrest can be adjusted by foot from a sitting position. That is why these footrests are recommended above all others by ergonomists and work place advisors. All "Basic footrests" are available in an "ESD version". In combination with an ESD safe chair, you can be sure that accumulated static electricity is not discharged through you but through the ESD safe chair or footrest. This prevents damage to your computer and peripheral electronic equipment.

Basic Line

Basic 950

■ ■ ■ ESD Line

The friction of different materials (especially plastic) generates static electricity. If you touch e.g. metal or more unfortunately “an ESD-sensitive component”, this may be discharged through you as small shocks. Unpleasant for you, but damaging to the electronic component you are working with. As a result, high repair and/or replacement costs. You can prevent this with an ESD-safe workplace (EPA). ESD stands for Electronic Static Discharge, i.e. the discharge of static electricity. By using conductive components and upholstery on our chairs, the static electricity is continuously discharged from the chair through the conductive floor to an earthed point in the workplace. Score has an extensive range of approved ESD-safe chairs, which can be delivered with a resistance of “1Mohm” to ensure a controlled discharge. The motto “no electrical charge means no discharge” is used as a basis for these chairs. Score ESD chairs and footrests comply with the “IEC 61340-5-1” directive and have been tested by the “SP Technical Research Institute” from Sweden.

■ ■ ■ Cleanroom Line

When working in a cleanroom, it is of the utmost importance to have and keep the room free of dust particles. Score chairs have been tested by the Fraunhofer Institute and comply with the directive DIN EN ISO 14644_1, ISO class 4 (Class 10 according to the US Federal Standard 209E). These chairs are available in ESD leatherette or polyurethane, which will not disperse or attract dust particles. If necessary, the Score chairs can be equipped with a Hepa filter. This filter ensures that, when you sit down or move on the chair, the dispersed air is always filtered and no dust particles will be released in the room.

■ ■ ■ Stainless Steel Line

When hygiene requirements are strict in a department, there really is only one solution: stainless steel. With its sophisticated 800 range, Score has hit the nail on the head. This stainless-steel line resists the wear that frequent cleaning with chemical disinfectants or water causes. And, thanks to its high base, the space underneath the chair is also easy to clean. Very suitable for the food industry and hospitals. Note: At places where a high degree of salt and/or chloride is used, we recommend avoiding the use of a gas spring and setting a fixed height instead and using electrolytically polished stainless steel 316 as the fundamental material.

Stainless Steel Line

801 Stainless Steel

- Height adjustment 43-59 cm
- Worksurfaceheight 70-80 cm

802 Stainless Steel

- Height adjustment 56-80 cm

■ ■ ■ Ergonomic accessories

Score offers a wide variety of suspension systems to make work and presentations easier. From small desk standards to big wall systems. Trolleys for large and small TV screens, digital school boards and touch screens up to 145 kg, including:

- ErgoFrame® trolleys and wall systems for digital school boards in combination with a beamer
- ErgoFrame® trolleys and wall systems for touch screens from 32" to 70"
- Screen and monitor suspension supports for desk, wall and ceiling from 15" to 60"
- CPU holders
- Beamer supports
- Notebook supports

Monitor supports

NOT1200

- Laptopcarrier manufactured out of Hylite 260 gram

SCD0510/SCD0511

- Flatscreen holder for screens up to 15 kg
- With a clamp mounting system for worktops up to 70 mm

SCD0520/SCD0540

- Flatscreen holder for 2 screens up to 7,5 kg each
- Rosette fastening for worktops up to 70 mm

SCD0522

- Flatscreen holder for 2 screens back to back up to 7,5 kg each
- Rosette fastening system for worktops up to 70 mm

Screen mounting

SCW1500 ZW

- For monitors up to 20 kg
- Wall mounting
- VESA Standard

SCC1400

- Screens from 27"-60" up to 50 kg
- Ceiling mount (height adjustable)

SCT1502

- Trolley for screens up to 50 kg
- Height adjustment 110-180 cm
- 4 castors, 2 with brake

EFE0100 ErgoFrame®

- Mobile trolley for interactive whiteboards
- With electrical height adjustment 65 cm

How to recognise a good working chair

- 1** The back supports the lumbar area of the back.
- 2** Seat and back are finished in reliable and easy to clean material. The seat surface must not be too smooth.
- 3** The chair rotates smoothly and is easy to adjust in height
- 4** For flexible workplaces the chair is simple and easy to adjust to the wishes of the user.
- 5** A five star base and a large outline for a good stability and security of the chair.
- 6** The back is slightly and moderately curved
- 7** If possible the chair should have armrests that are adjustable in height and width.
- 8** The angle between the back and the seat is approximately 90°.
- 9** The size of the seat has to be large enough so the user can change his seating position regularly and if possible provided with a seat slide for tall people.
- 10** The seat is nearly flat and rounded on the frontside.
- 11** The robust foot support has a comprehensive size, so that the feet can be moved and easy to adjust to the wishes of the user
