

**JUMPER/AMAZONE BALANCE
WINNER OFFICE PRODUCTS AWARD 2013!**

An even better ergonomic seat, thanks to the new Balance technology.

Score, the Dutch market leader and manufacturer of ergonomic seating solutions, introduces the new Balance mechanism. The innovative mechanism allows users to precisely adjust the chair to their body weight and obtain the ideal comfort.

The Balance mechanism provides people with a back problem an active seat. The saddle 'forces' the spine in a good posture. The seat moves slightly with the user causing the back muscles to strenghten. With stronger back muscles, the user sits more relaxed at his workplace. The extent to which the seat tilts can also be adjusted by the innovative mechanism accurately. From today the successful Score Jumper (wide seat) and Score Amazone (narrow seat) is available with the Balance mechanism.
